Declassified in Part - Sanitized Copy Approved for Release 2012/09/14: CIA-RDP82-00457R009000070009-3 50X1-HUM CRET-CONTROL/US OFFICIALS CALY SECURITY INFORMATION d. The medical depot in Altlandsberg (K 53/ V 05) was deactivated several years ago. The installation was a veterinary depot. 50X1-HUM no Soviet troops had been stationed in this area for years. 50X1-HUM no unusual build-up of medical supplies by the Soviet forces in Germany. The turn-over at the medical depots in the Soviet Zone of Germany continues to be normal. It was observed that all the three medical dopots received shipments of litters and splints. However, this is not considered unusual. As far as could be observed, the depots were resupplied from the U.S.S.R. at a normal level. No information is available on the type or amount of supplies on hand at the depots. The same applies to evacuation and clearing facilities. It is believed improbable that facilities designed to speed up the evacuation of wounded are being set up at present. However, plans are certainly prepared for such

50X1-HUM

measures in the event of war.
